

YOUR AI TASK PORTAL

A permanent, searchable home for all your Claude and Manus work

Manus

All your Manus tasks, backed up automatically

Claude

All your Claude sessions, organized by project

GitHub

Free hosting via GitHub Pages, always live

What you'll have when you're done:

■ Live portal at your own GitHub Pages URL

Permanent, free, no server needed

■ Optional PIN protection

Secure from casual browsing

■ All Manus tasks archived

128+ tasks with credits, status, dates

◆ All Claude sessions logged

Every build, automation, and strategy session

■ Auto-sync on push

GitHub Actions rebuilds whenever data updates

Time to complete: ~20 minutes

Requirements: GitHub account · Manus account · Claude account

PART 1

Build Your Manus Task Dashboard

Manus can build its own task dashboard — a full-stack React portal that pulls all your tasks from the Manus API, PIN-protected and live at a *.manus.space URL. This takes about 5 minutes.

Step 1 — Get Your Manus API Key

- Log in to your Manus account at **manus.im**
- Navigate to **Settings** → **API Keys**
- Click **Create API Key** and name it (e.g., *task-dashboard*)
- Copy the key — it starts with **sk-** and is shown **only once**, so save it securely

Step 2 — Start a New Manus Task

- Go to your Manus dashboard and click **New Task**
- Paste the prompt from Step 3 below into the message box
- Send it — Manus will build the entire dashboard automatically

Step 3 — The Manus Prompt

Copy the entire block below and paste it as your first message:

Build me a personal Manus Task Dashboard — a full-stack web app that serves as a portal for all of my Manus tasks.

Design:

- Dark theme: deep slate background with amber/gold accents
- Display font: Space Grotesk (load from Google Fonts)
- Monospace font: JetBrains Mono for IDs and numbers
- Title branding: "[YOUR NAME]'S MANUS TASKS"

Security:

- PIN lock screen on first load (4-digit PIN of my choosing, SHA-256 hashed)
- Session persists in sessionStorage so I only enter PIN once per session
- Lock button in the sidebar header to re-lock manually

Data:

- Fetch all tasks from Manus API v2 (<https://api.manus.ai/v2/task.list>)
- Full pagination (100 per page, follow next_cursor until has_more is false)
- API key stored as server-side env variable MANUS_API_KEY — never in browser
- tRPC backend proxy so browser never touches the API directly
- Show incremental loading progress as pages are fetched

Dashboard features:

- Stat cards: Total Tasks, Completed, Running/Waiting, Credits Used
- Bar chart showing task count by status
- Grid view (default) and list view toggle
- Search bar with debounce (Cmd+K shortcut)
- Filter by status, type, agent profile
- Toggle to hide subtasks
- Sort by newest / oldest / most credits

Task cards: title, status badge, type, agent, credits, created date

- Click to open detail panel with full metadata
- External link to open task in Manus
- Download task as JSON

Stack: React 19 + Tailwind 4 + shadcn/ui + Express + tRPC

After building, ask me for my preferred 4-digit PIN, save a checkpoint, and give me the publish button to make it live.

Replace [YOUR NAME] with your actual name before sending.

Step 4 — Enter Your API Key

During the build, Manus will ask for your API key as a secret environment variable. Paste the key from Step 1. It is stored securely server-side and never exposed in the browser.

Step 5 — Publish

- Once Manus finishes building, click **Publish** in the top-right of the Management UI

- Your dashboard will be live at a *.**manus.space** URL
- Bookmark it — this is your Manus task portal

To update your PIN anytime:

Send a message in the Manus task chat: "*Change my dashboard PIN to [4 digits]*" — Manus will update it and save a new checkpoint. Publish again to push it live.

Build Your Claude + GitHub Task Vault

A permanent, self-hosted portal that archives both your Manus tasks AND your Claude sessions — deployed free on GitHub Pages and auto-syncing whenever you push new data. No server required.

Step 1 — Create a GitHub Repository

- Go to **github.com** and sign in (or create a free account)
- Click the **+** icon → **New repository**
- Name it something like **my-task-vault**
- Set it to **Public** (required for free GitHub Pages)
- Click **Create repository**

Step 2 — Open Claude and Paste This Prompt

Go to **claude.ai**, start a new conversation, and paste the prompt below. Claude will build your entire portal — the HTML file, data files, GitHub Actions workflow, and push everything to your repo automatically.

I want you to build me a personal AI Task Vault – a self-contained HTML portal hosted on GitHub Pages that archives all my Manus tasks and Claude sessions.

Here is my GitHub repo: [YOUR_GITHUB_USERNAME]/[YOUR_REPO_NAME]

What I need:

1. PORTAL (index.html – single self-contained file, no build step needed)
 - Dark theme with amber/gold accents, Space Grotesk font
 - Sidebar with Manus / Claude source toggle
 - Manus tab: all tasks with status, credits, agent, date filters
 - Claude tab: all my Claude sessions by type and category
 - Activity bar chart, grid + list view toggle, search (Cmd+K)
 - Task detail slide-in panel with links back to original conversations
 - Live fetch from GitHub raw on load (always shows latest data)
2. DATA FILES
 - tasks_data.json: my Manus task archive
 - claude_tasks.json: my Claude sessions (I will describe them to you)
 - apps_websites.json: notable apps/sites I have built
3. GITHUB ACTIONS WORKFLOW (.github/workflows/build-portal.yml)
 - Triggers when tasks_data.json or claude_tasks.json is pushed to main
 - Rebuilds index.html automatically and commits the result
4. GITHUB PAGES
 - Enable GitHub Pages (source: main branch, root folder)
 - Portal live at: [https://\[username\].github.io/\[repo-name\]/](https://[username].github.io/[repo-name]/)

To push files to GitHub I will give you a Personal Access Token (PAT).
Generate one at: [github.com](https://github.com/settings/developers) > Settings > Developer settings >
Personal access tokens > Tokens (classic) > repo scope.

Once everything is built, walk me through adding my Claude sessions and tell me how to keep it updated going forward.

Replace [YOUR_GITHUB_USERNAME] and [YOUR_REPO_NAME] with your actual values.

Step 3 — Generate a GitHub Personal Access Token

Claude needs a PAT to push files to your GitHub repo on your behalf. This is a one-time setup step.

- 1 Go to github.com → click your profile photo → Settings
- 2 Scroll down the left sidebar → Developer settings (very bottom)
- 3 Personal access tokens → Tokens (classic)
- 4 Generate new token → Generate new token (classic)

- 5 Give it a name, set expiry to 7 days, check the repo checkbox
- 6 Click Generate token — copy it immediately (shown only once)
- 7 Paste into Claude when asked — revoke it immediately after setup

■ Always revoke your PAT immediately after Claude finishes pushing files. Go to Developer settings → Personal access tokens and delete it.

Step 4 — Enable GitHub Pages

- Go to your repo on github.com
- Click **Settings** → **Pages** (left sidebar)
- Under Source, select **Deploy from a branch**
- Branch: **main**, Folder: **/ (root)**
- Click **Save** — your portal will be live within 60 seconds

Your portal URL: **`https://[your-username].github.io/[your-repo-name]/`**

Keeping Your Portal Updated

Once set up, keeping your portal current takes minimal effort. The GitHub Actions workflow handles the rebuild automatically.

How Auto-Sync Works

Every time you push an updated data file to your GitHub repo, the Actions workflow fires automatically — it rebuilds index.html with fresh embedded data and deploys it to GitHub Pages within about 60 seconds.

Adding New Claude Sessions

Whenever you complete a significant Claude session, add it to **claude_tasks.json** by describing it to Claude — Claude will format it correctly and push the update to your repo.

Syncing Manus Tasks

Manus can be configured to push an updated **tasks_data.json** to your GitHub repo automatically. Give Manus your repo name and a GitHub PAT, and it will handle the sync on its own.

Quick Reference

TASK	HOW TO DO IT
Add a new Claude session	Tell Claude what you built — it formats and pushes the update
Sync latest Manus tasks	Give Manus your repo name + PAT, it pushes tasks_data.json
Update your portal PIN	Tell Claude "update the PIN in index.html to [digits]"
View your portal	Open https://[username].github.io/[repo-name]/ in any browser
Enable GitHub Pages	Repo → Settings → Pages → main branch → root → Save
Generate a PAT	github.com → Settings → Developer settings → Tokens (classic)
Revoke a PAT	Same location — click the token name → Delete
